CDS503 Lab 1

Lab Exercise

Form a small group of 2 people and look at the census income data (adult.txt can be downloaded from elearn@usm). Refer to Table 1 for the description of each attribute in the dataset.

Table 1

Attribute	Description
age	The age of an individual in years.
workclass	A general category to represent the employment status of an individual.
fnlwgt	Final weight. This is the number of people the census believes the entry represents.
education	The highest level of education achieved by an individual.
education-num	The highest level of education achieved in numerical form.
marital-status	Marital status of an individual.
occupation	The general type of occupation of an individual.
relationship	Represents what this individual is relative to others.
race	Description of an individual's race.
gender	The gender of the individual.
capital-gain	Capital gains for an individual.
capital-loss	Capital loss for an individual.
hours-per-week	The hours an individual has reported to work per week.
native-country	Country of origin for an individual.
income-class	Income of the individual whether >50K or <=50K.

Look at each attribute and see what type of data it has.

Question 1: Answer the following questions:

a) What are the types of the attributes?
   - age
   - workclass
   - fnlwgt
   - education
   - education-num
   - marital-status
   - occupation
   - relationship
   - race
   - gender
   - capital-gain
   - capital-loss
   - hours-per-week
   - native-country
   - income-class

b) What classification task(s) can be formulated from this data?
c) What application question will this task be useful for?
d) What other attributes might be useful for this application question?
